

About

Hello, I am Tomi Sarjamo, a Senior DevOps Engineer and Full-Stack Developer specializing in cloud-native platforms, GitOps, and AI-driven development. I have a strong track record in architecting scalable delivery workflows and developing complex financial and industrial software solutions. Passionate about developer experience and platform automation.

Core Skills

AI & PLATFORM

Agent-based development
AI-driven workflows
Prompt engineering
GitHub Copilot

LANGUAGES

TypeScript
JavaScript
React
Vue.js

Platform Engineering

Node.js

Java

Python

C#

C++

CLOUD & DEVOPS

Azure (AKS)

AWS

Kubernetes

OpenShift

Terraform

GitOps (ArgoCD)

GitLab CI/CD

Docker

DATABASES & TOOLS

PostgreSQL

MySQL

MongoDB

ELK Stack

Kafka

Robot Framework

Work Experience

 Download CV (PDF)

Senior DevOps Engineer

05/2026 - Present

Mandatum

Architecting a DevOps portal using Vue.js, Node.js, and Python. Streamlining delivery workflows through AI-driven practices and managing scalable AKS/OpenShift environments with GitOps (ArgoCD) and Terraform.

Senior Software Developer

08/2024 - 05/2026

Vivicta / Tietoevry

OP Pohjola

Full-stack development for banking and finance systems, focusing on credit granting and financing decision applications. Stack: React, TypeScript, Java/Spring Boot, Kafka, and Test Automation.

Senior Software Engineer

04/2022 - 08/2024

Softability Oy

ABB Drives

Worked on embedded systems and industrial AC drives. Developed internal Automated Testing Frameworks (ATF) using C#, .NET, C++, and Python. Focused on fieldbus programming and CI/CD pipelines.

Software Consultant

03/2021 - 04/2022

Comiq

Helsingin kaupunki, Picosun Oy

Full-stack consulting for public and private sector clients using open-source technologies. Implemented E2E testing, Keycloak auth, and observability solutions (ELK Stack).

Software Developer / Architect

10/2019 - 03/2021

Tieto

Arek Oy, HSL

Architecture design and troubleshooting for complex Java-based systems. Managed containerized environments with Kubernetes and Docker for various client projects.

Project Engineer

03/2018 - 12/2018

Dynniq Finland Oy

Developed intelligent traffic solutions and UI configurations for Finnish cities. Worked on Android cycle applications, traffic calculations (Java/Python), and data analysis using ELK.

Test Automation Engineer

01/2012 - 12/2015

Etteplan Oyj

ABB Drives

Designed and implemented automated testing for frequency converters and industrial drives using C# and Python. Maintained integration servers and automated scripts.

Education

Bachelor of Engineering (B.Eng.) in Electronics

2010

Metropolia University of Applied Sciences

Specialized in Electronics Design and Software Development.

Computer Science (Open University)

2019 - 2025

University of Helsinki

Computer Science studies focusing on modern software development, including: Full Stack Open, Test-Driven Development, Securing Software WEB Server Programming, Programming MOOC Java/Python (Advanced course) and Databases.
